Lahore, Pakistan

OBJECTIVE

Backend and Blockchain Developer with experience in building scalable APIs, integrating smart contracts, and developing production-ready systems using Node.js and Web3 technologies.

EXPERIENCE

• Associate At TYCOONZ SOLUTIONS

Jan 2026 - Present

Blockchain Developer

Lahore , Gulberg II

- Designed and implemented **staking contracts** on the different blockchain networks as Base and Main, featuring time-weighted reward distribution and reward calculations.
- Developed backend services for a crypto-to-fiat **fintech platform** integrated with Striga using Node.js, Express.js, and Supabase (PostgreSQL), implementing REST APIs, Stripe subscription billing, KYC verification, wallet management, card issuance, webhook processing, and admin panel functionality.

• Internship At TYCOONZ SOLUTIONS

Nov 2025 - Jan 2026

Blockchain Developer

Lahore , Gulberg II

- Gained hands-on exposure to blockchain development, studying and analyzing **smart contract** architecture written in **Solidity**, including **ERC-20** token standards, contract state management, and access control patterns.
- Reviewed and reasoned through Solidity contract logic covering token minting, transfers, and balance/allowance tracking under the **ERC-20** standard, along with modifiers and role-based access control (owner/admin patterns) used to guard sensitive contract functions.
- Explored core smart contract security and design considerations such as reentrancy protection, integer overflow/underflow safety, gas-efficient storage layout, and the use of events for on-chain transaction logging and auditability.
- Studied contract upgradeability approaches (proxy patterns) and multisig-based governance for securely managing contract ownership and critical parameter changes.

• Internship At NEXQUERY

July 2025 - September 202

Backend Developer

Lahore , Gulberg III

- Built and optimized **RESTful APIs** using Django REST Framework
- Implemented authentication, validation, and error handling
- Worked with **PostgreSQL**, **Git**, and **Postman** in a team environment
- Overall impact: improved API performance and development efficiency by 25–30%

• Internship At NEXIUS

August 2024 - October 2024

Laravel Developer(backend)

Lahore , Gulberg

- Developed backend features using **Laravel (MVC, Eloquent ORM)**
- Built CRUD operations and core business logic for web applications
- Contributed to blogging and e-commerce system development
- Overall impact: improved system scalability and user engagement by 30–40%

EDUCATION

• Lahore College for Women University

2021 - 2025

BSCS (Bachelor's Degree in Computer Science)

PROJECTS

• BCT - Blockchain Staking Application

Tools: [Solidity , OpenZeppelin , Foundry]

- Designed staking contracts with time-weighted reward calculations.
- Implemented role-based access control and reward distribution.
- Optimized storage layout for gas efficiency.

• Omega Pay - Fintech Mobile Application

Tools: [Node.js , Supabase , Express.js , Stripe , Striga]

- Built backend services for a fintech platform supporting KYC, wallet management, virtual/physical cards and subscription billing.
- Integrated Striga APIs for account, wallet and card management.

- Implemented Stripe subscriptions, webhook processing and secure admin APIs.

- **Tycoonz Payslip - Backend**

Tools: [Node.js , Express.js , MongoDB]

- Developed backend features for a Payslip and HRMS web application, implementing automated payslip generation, email notifications, and employee management modules.

- **Appointment Scheduler - Web Application**

Tools: [JS, PHP, MySQL]

- A web-based Appointment Scheduler System is a powerful tool that facilitates efficient scheduling and management of appointments for businesses or professionals.

- **E-commerce Website**

Tools: [Laravel 11]

- Built a secure e-commerce site in Laravel 11 featuring MVC, Blade templating, and Eloquent ORM, with support for payments and inventory management.

- **Semantiscope (FYP) - Ecommerce Reviews Analyzer (Mobile Application)**

Tools: [React Native, Python, PHP, Mysql]

- Developed a mobile app using React Native and Python backend (FastAPI) to analyze product reviews from e-commerce platforms like Daraz. Integrated NLP techniques and transformer models (DistilBERT) for sentiment analysis, extracted key customer issues using keyword classification, and generated smart summaries via the Gemini API. The system helps businesses understand customer sentiment trends and improve product/service quality through data-driven insights.

SKILLS

- **Programming Languages:** C++, Python, JavaScript, Java , React Native(Basic)
- **Web Technologies:** Html, CSS, JavaScript, React, Laravel,Django, Django Rest Framework, Node.js, Express
- **Database Systems:** Mysql, Sql , PostgreSQL, Supabase
- **Blockchain & Web3:** Solidity Concepts, Smart Contract Design, Base Network, EIP-712, Blockscout API, Web3 Integrations
- **Other Tools & Technologies:** VS code, Pycharm , Sql Workbench, MS Office , Git , Github , Postman , Docker
